Few products have known the success of nylon and only a few antibiotics have caused such a considerable sensation in the general public on their first appearance or have known such lasting fame and popularity and justified to such an extent the hopes placed in them. It should also be added that few products have had so much nonsense talked about them — either in their favour or against them. (It will immediately be seen from this that we are not among those who acclaim each new discovery as a miracle or who see everywhere only exaggeration and advertising propaganda.)

Nylon owes the rapidity with which it has become known and asserted itself industrially to the fact that it was born and grew up in America, and that it came just at a time when military needs called for the rapid production in large quantities of a product which, if not perfect, at least offered interesting new qualities capable of being put to immediate practical use. Half a century earlier, artificial silk had had a more difficult start !

In Europe, a great deal was heard of nylon towards the end of the war, a long time before it came into the hands of the public. Then the first stockings made their appearance, coveted by women everywhere, articles of contraband and speculation... Nylon yarn itself, which the United States could not deliver in sufficient quantities to satisfy the demands of the converters, was the object of black market deals. The fabrics were the last to come. Meanwhile, Europe had made the necessary preparations and nylon spinning started up in Switzerland. The use of nylon in weaving raised problems more complicated than those in hosiery. The particular properties of the new fibre, its handle, for example, do not allow it to be used as it is, and it was necessary to look for — and find — particular textures and finishes that would allow the excellent wearing qualities of nylon to be used to advantage in the clothing industries.

In Switzerland, a fairly large number of firms specialising in silk have included nylon articles in their manufacturing programmes and their products today are meeting with great success on markets abroad. Most of the yarns used are produced at home — this output of yarns moreover is easily absorbed by the industries of the country, and home and foreign demand is still greater than the supply. The finishing establishments, too, have an important task to fulfil, which moreover they are accomplishing to their credit. In the field of spinning too, Switzerland has adopted the new fibre, a step which is essential for it is not possible to sew nylon fabrics with thread of another material.

Swiss exports of nylon fabrics are not very great, compared with the figures for other similar items. Nevertheless several facts must be taken into consideration : first of all, world supplies of the raw material are still less than the demand, and secondly, Switzerland has not been long in the ranks of producers and her capacity of output is limited (voluntarily limited moreover since in this field, as in so many others, she prefers to confine herself to the manufacture

of better quality, more exclusive articles which could not be produced in unlimited quantities). It is difficult moreover to draw any useful conclusions from the few figures in our possession, for it is only since the second half of last year that nylon has figured separately in Swiss foreign trade statistics ; until then it had been included under rayon.

It seems that in the field of synthetic fibres — or man-made fibres as they are called in America — we need no longer expect any further sensational inventions that would completely upset the positions and the knowledge already gained and oblige manufacturers to incur new expenses. The problems raised by the appearance of new materials would remain within the scope of present research. One can therefore almost certainly

count on an assured future for nylon, whatever modifications it may undergo. It would be a mistake however to attribute to it qualities it does not possess and to use it for purposes for which it is not suited, to consider it a miraculous product, a sort of universal « ersatz », which would soon prove as disappointing as the extent to which it had been used wrongly.

Swiss manufacturers then, see in nylon a new product whose particular characteristics will enable it to exist alongside silk, rayon, cotton, etc., without any need for it to supplant any of these traditional fibres. Nevertheless they have tried right from the start to give their nylon fabrics the particular touch of quality and elegance that has already made the reputation of their silks and fine cottons. In addition to the crinkled and other plain fabrics that are already classic, we have seen in recent Swiss

collections some printed crinkled nylons and organzas, fancy voiles, piqués, matelassés, fine embroidered fabrics, mousse-lines and flock print voiles of very superior technical and artistic quality, some tartans, striped, ribbed and flammé yarn-dyed fabrics in strong, supple textures with a slightly rough handle, shantungs, etc.

Although we have already spoken of the finishers, we wish to draw attention here to the prominent part they are playing, in close collaboration with the creators, in contributing towards the richness and beauty of the Swiss collections of nylon fabrics. They have succeeded in finding the answer to several difficult problems such as, for example, printing in white on a coloured ground (discharge process) — long considered to be impossible on nylon —, metallic flock printing, permanent goffering and pleating and other novelties capable of bringing infinite variety to materials that one thought one knew already !

What are nylon fabrics used for? They are always popular for simple, practical blouses, or those that are more elegant but no less practical, and for lingerie. They are also used to make dresses, from the house-dress and the light unpretentious outfits for summer days — quickly washed, quickly dried and immediately ready to wear — to the cocktail dresses and suits in matelassé and taffeta, and the diaphanous evening dresses to which nylon lends its impeccable drape and which, by the beauty of their texture, colour and pattern, make this new fibre into a very prominent, practical and glamorous member of fashion.
