List of the studied *Lemnaceae* samples: origin and chromosome numbers

by

Elias LANDOLT and Krystyna URBANSKA-WORYTKIEWICZ

The list serves as the point of reference to the papers on taxonomy (E. LANDOLT) and cytological variation within the *Lemnaceae* (K. URBANSKA-WORYTKIEWICZ), published in the present volume.

The samples were partly collected in the wild by the authors, but mostly obtained from numerous collectors either in form of sterile cultures or as live materials. Unfortunately, some samples died soon after arrival, so cytological studies have not been possible.

The list follows a general structure of the *Lemnaceae* family, the particular taxa being placed in the same order as in the two afore mentioned papers. As far as the origin of the material is concerned, the following sequence of geographical regions and continents has been accepted: North America, Central America and West Indies - South America - Europe - Africa - Asia - Australia - Pacific Ocean Region. On the other hand, countries, states, provinces or counties as well as definite locations are listed alphabetically.

The markings and abbreviations used in the list:

- * = obtained as sterile cultures
 - R. = remarks; see the headings
 - + = alive; shall be kept in the collection of the Geobotanical Institute ETH (Swiss Federal Institute of Technology), Zürich, at least until January 1982
 - = eliminated after having been studied
 - ns = no cytological study, samples dead or arrived after January 1st, 1980
 - L. = LANDOLT
 - U. = URBANSKA-WORYTKIEWICZ
- Chromosome numbers given in brackets refer to aneusomatic or mixoploid fronds.
Two chromosome numbers separated by a comma refer to mixed populations.
