**ERRATUM** to the work of N. SZABO: *Paramagnons and Magnons of the Quantum Heisenberg Model and the Modular Hilbert Algebras*, H.P.A. Vol. 52, 129–143 (1979)

On page 139 equation (4.9a) and the magnetization  $M$  are defined as follows:

$$\bar{s}_3(k) = \sum_{\mathbf{R}} [s_3(\mathbf{R}) - M] \exp(ik\mathbf{R}), \quad \bar{s}_-(k) = \check{s}_-(k) - \frac{1}{2}[H_{\Lambda_\alpha}, \check{s}_-(k)]\mathbf{R}_\perp M \quad (4.9a)$$

and

$$M = (\check{s}_-, H\check{s}_-).$$

On page 140 the formulas (4.12), (4.15), (4.17a), (4.19) and (4.20) should be read as follows:

$$\psi = \begin{pmatrix} 0 & 1 & 0 \\ \overline{R_{\parallel}^{-1}D_{\parallel}} & 0 & 1 \\ 0 & R_{\perp}^{-1}D_{\perp} & 0 \end{pmatrix} \quad (4.12)$$

$$\Sigma_{\parallel}(k, z) = -R_{\parallel}(QH^2 s_3, R_Q(z) QH^2 s_3),$$

$$\Sigma_{\perp}(k, z) = -R_{\perp}(QH^2 s_-, R_Q(z) QH^2 s_-), \quad (4.15)$$

$$z\phi_{s_{-1}Hs_-} - \phi_{Hs_{-1}Hs_-} = 0, \quad (4.17a)$$

$$[z^2 - R_{\perp}^{-1}D_{\perp} + z\Sigma_{\perp}(k, z)]\phi_{s_{-1}Hs_-} = R_{\perp}^{-1}, \quad (4.19)$$

$$[z^2 - R_{\parallel}^{-1}D_{\parallel} + z\Sigma_{\parallel}(k, z)]\phi_{s_3Hs_3} = R_{\parallel}^{-1}, \quad (4.20)$$

Further on page 142 it should stand in the 7. line:

... thanks to the term  $R_{\perp}^{-1}D_{\perp}$  in (4.19) and ...

**ERRATUM** to the work of F. HEINRICH: *The Influence of an Electric Field on the Positron Implantation Profile in Polyethylene* 51, 433 (1978)

The brackets in formulae (5) and (6) should be read as  $(2 - \mu_0 x)$  instead of  $(1 - \mu_0 x)$ . Thus, the assumption of the negative charge of the drifting system can be avoided. I gratefully acknowledge discussions with Prof. A. Hrynkiewicz and Dr. W. Osoba. More details and further measurements in other polymers will be published soon.
