Fig. 1. Digging lug worm on the sea-shore north of Esbjerg, Jutland. The pictures show the heavy fork, length about 140 cm., and a bucket for holding the worms, instead of the old-fashioned wooden box. Behind the digger is seen an *orme-groft* (worm-ditch). Photography T. Tobiassen 1942.

Fig. 2. Fisherman pounding lug worm. Drawing by C. G. Lekholm 1941. In his belt the man is carrying a comb for collecting worms, and he has a wooden box for holding them. He wears boots of a special construction on his feet (cf. note 7).

Fig. 3. Danish fisherman with his equipment for pounding lug worm. Drawing by Johan Peter Raadsig, possibly from Hornbæk, Zealand, about 1850. The equipment consists of rammer, comb and wooden tub.

Fig. 4. Two different types of implements for collecting lug worm. The small landing net has a shaft about one metre long. The comb is incomplete as part of the shaft is missing. Museum of Gilleleje: Fishery Collections (cf. note 8)
