HURRICANES AND SUNSHINE

February, like January, was a generally mild month with less rain and more sunshine than usual, especially in the Midlands and the Jura where 120-140% of the normal duration of sunny periods was registered. The Ticino was somewhat below average. Snow for wintersports was not too plantiful except for the higher regions.

On 23rd February, a hurricane-like storm swept through Switzerland causing widespread damage and some loss of life; the temperature dropped immediately by about 10°C. Train services were disrupted and delayed, trees were uprooted, churches, schools, factories as well as homes were made roofless or otherwise damaged. Near Kapelleg (Lucerne) 500 fir trees were uprooted or broken in a small area no more than 400 metres long. 40,000 cubic metres of wood were uprooted in the Aargau, 83,000 in Solothurn. The new rifle range at Sargans was pulled off its foundation walls, and the TV aerial mast Biberlikopf was broken. Several cranes of considerable size and height were pulled down. The hangar of the Alpine Rescue Service at Kloten was badly damaged, and tram trailer cars were derailed near Basle. In the Diegter Valley (Baselland), land subsided and caused accidents and loss of life on the construction site of the Ebenrain tunnel (N2).

The storms raged for several days, and damage has been such that even in Parliament questions were asked. Early March, from everywhere in Switzerland, brilliant sunshine and warm weather were reported. The only exceptions as to high temperatures were Arosa, Bivio and the Jungfraujoch, although there, too, the sun smiled as if the hurricanes had never happened.

Reports have been published regarding hail damage in 1966; 9,000 incidents had been reported, and 6.1m. francs have been paid out in claims.
