# Jersey-French Fishing Terms<sup>1</sup>

# I. Introduction

Fishing in Jersey is a moribund industry; the vastly increased prosperity of agriculture has drawn men away from the sea. In any case, modern communications, by permitting the importation

<sup>1</sup> The material for the following article was collected mainly between 1948 and 1951 during a wider investigation of the Norman dialect spoken in Jersey. The medium of investigation was English, now firmly established as the standard language of the Channel Islands; a questionnaire was used, but the method of *'conversation dirigée'* was also used extensively with certain subjects.

The accompanying map indicates the areas from which my informants were drawn, together with their names and ages. It will be noted that all of them, except F. Bisson (J. 1) and J. Priaulx (0.1), were from the east of the Island. This is due mainly to the fact that the traditional fishing 'harbours', with the exception of Bonne Nuit Bay in the centre of the North coast, are in that part of the Island. Lexical, as distinct from phonetic, variations are not very numerous. Since this is primarily a lexical and ethnographical study, I have to some extent simplified and normalised the notation of the dialect, except where quoting words given by specific individuals. Roughly speaking, the more archaic form has been normalised: e.g., the diphthong ay deriving from Latin al + consonant, which is still heard in E. Jersey, has been assimilated to ou in W. Jersey. In general, however, secondary developments are found above all in E. Jersey. The following key will help in the interpretation of the normalised forms.

Normalised form	West Jersey form (abbrev. WJ; NWJ = N.W. Jersey)	East Jersey form (abbrev. EJ; SEJ = S. E. Jersey NEJ = N. E. Jersey)

of fish from England, have made it almost impossible for the local man to compete with the trawler fleets of Lowestoft, Grimsby or Hull<sup>1</sup>, except in a special field such as lobster-fishing. As early as 1913, the French geographer, C. Vallaux, speaking of the southeastern and eastern coasts of the Island, wrote:

'C'est là, en particulier à Gorey, à La Rocque et au Hocq, qu'il faut chercher les rares pêcheurs qui existent aujourd'hui dans cette île ou les métiers de mer n'attirent plus personne<sup>2</sup>.'

F. Bisson of St. John's, born in 1874, remembered the days when seventy men fished from Bonne Nuit Bay: now there are only five, of whom three are 'foreigners' – that is, Englishmen (or, to quote certain local fishermen –  $de \ bagr \ d \ agyeil$ ).

# Normalised form West Jersey form East Jersey form

ę	ę	Rozel, Grouville $\tilde{a}$ , with
8	12	intermediate stage $\tilde{g}$ in some other parts of EJ.

a	a	å
$\stackrel{e}{ar{a}}_i (< \mathrm{long}\mathrm{e} + \mathrm{nasal})$	$\stackrel{e}{ar{a}}_i$	generally $a$ generally $\bar{a}$ i, NEJ  e

I have not generally marked a as a front vowel, since it tends towards a velar articulation.

The accent has been noted only where it does not fall on the final syllable.

<sup>1</sup> In 1952, 898 tons of fish were imported into Jersey (*Statistics* of exports and imports, Jersey, 1953).

<sup>2</sup> L'archipel de la Manche, Rennes-Paris, 1913.

## Jersey-French Fishing Terms

It is a far cry from the days when the Channel Islanders played an important part in the Newfoundland fisheries<sup>1</sup>, or from the early decades of the nineteenth century, when the oyster fisheries in Grouville Bay gave employment to some 2,000 English and Island fishermen, as well as hundreds of other workers ashore<sup>2</sup>. Overfishing of the beds led to a rapid decline in the industry, and it was practically extinct by the middle of the century. Sporadic efforts were made later to revive the beds, and F. Bisson remembers sailing with the oyster boats – decked craft of about 35 ft. known as  $k_{0}t \ddot{o}r$  ('cutters') – some sixty-five years ago.

Young men today do not feel that fishing (peik f.; ön bwon peik'a good catch'; peici v., ale v. ou peiso 'to fish, go fishing') is a worth-while occupation; they say that it is tedious and, above all, unprofitable. Everyone connected with the industry agreed that fish were much scarcer than formerly, ascribing this variously to pollution of the sea by waste fuel oil, to the disappearance of the fields of marine grass (*Zostera marina*) which formerly attracted many fish<sup>3</sup>, and to the inroads of French fishermen outside the coastal limit.

Judging by the local saying  $mei\hat{c}i$   $pei\hat{c}\bar{o}$ ,  $mei\hat{c}i$   $pyers\bar{o}^4$  ('fishing trade, lazy trade'), fishing has not for a long time been a very highly respected calling. The small boat (*bate*, pl. *baĉaų*; *bate* m. d peik, bate m. peiĉ $\bar{o}$  'fishing-boat') of the average fisherman (peiĉ $\bar{o}$  m., pl. peiĉ $\bar{o}$ ; R. 2 also peisuni m., pl. peisunyer, generally

<sup>1</sup> Over a hundred ships sailed for Newfoundland from Jersey in 1646. About two centuries later, an official document about the Newfoundland trade showed that in 1835, 79 Jersey ships totalling 8,485 tons, with a complement of 1,275 men, were engaged in the fisheries, and a further 2,680 men employed in shore establishments owned by Jersey firms. Jersey ships continued to sail for the Banks, in gradually decreasing numbers until the 1880's (cf. P. DALIDO, *Jersey: île agricole anglonormande*, Vannes, 1951, p. 79).

<sup>2</sup> Vide G. R. BALLEINE, History of Jersey, London, 1950, p. 287.

<sup>3</sup> Zostera beds off the American, British and French coasts were almost wiped out by a mysterious disease which made its appearance in 1931 (cf. L. R. BRIGHTWELL, Sea-shore life of Britain, London [1947], p. 70).

<sup>4</sup> West Jersey form; the EJ equivalent of  $\ddot{\varrho}$  in most words is a secondary diphthong  $q\dot{i}$  – hence EJ  $pe\dot{i}c\dot{q}\dot{i}$ ,  $py\check{e}r\check{s}q\dot{i}$ , etc.

#### N. C. W. Spence

used with sense of 'fish-monger') could not venture far in unsettled weather, and there must have been long periods of inactivity during which he eked out a precarious living cultivating his small patch of land. Today's fishermen are, with rare exceptions, men of sixty and over, some of them veterans of the old wind-jammers. Most of them have land as well as their boats, which are normally laid up ( $e_i šwe v., metr a t \bar{e}r$ ) during the winter, but they are still among the poorer members of the community.

The average fisherman has an intimate knowledge of the currents and rocks on his part of the coast, and of the various states of the tide, which in these waters falls as much as forty feet during the equinoxes. He seldom ventures more than a few miles from the coast, for this is sufficient for his purpose. His craft is an open boat, seldom more than eighteen feet long, powered by a small engine or outboard motor; sail went out of general use in the 1920's. He concentrates on the setting of lobster- and crab-pots and stationary nets and lines, working sometimes with a partner, but alone if needs be. Some fishing is done with 'flow-lines' trailed from a moving boat, and there is some trawling in the Bay of Grouville, but the Jersey fisherman is generally content to wait for fish to enter his traps, and then collect them at his leisure.

# II. 'Low-Water Fishing'

During the big equinoctial tides, particularly large areas of sands and rock-masses, interspersed with pools and gullies, are uncovered by the sea. At some points on the south coast the sea goes out nearly two miles. The rocks and pools are rich in shell-fish, and harbour some lobsters, spider-crabs and an occasional conger eel, offering a variety of enterprises to the 'low-water fisherman' (ale v. a la bās yau, bāsle v., WJ bāsyote v. 'to go low-water fishing':  $b\bar{a}sl\bar{\varrho}$  m. 'low-water fisherman'), who is generally an amateur out for an afternoon's entertainment.

For centuries, Jerseymen have been making up parties to go 'sandeeling' (ale v. ou lāšõ m., lāšune v.) by day or night. The eels lie buried in the sand near the low-water mark, and are generally impaled on the long teeth of special rakes (rāte m. a lāšõ) which

# Jersey-French Fishing Terms

are dragged through the sand by men wading in the shallow water. As they are caught, the eels are transferred to long, narrow boxes (*bweit* f. *a lãšõ*) slung waist-high in front of the fishermen. Alternatively, the eels can be scraped out of the sand above the low-water mark with the aid of a sickle-like hool (*krocě* m. *ă lãšõ*).

The low-water fisherman can also attempt to spear ( $herp\tilde{\rho}$  m.,  $di\hat{g}e$  m. 'fishing spear or trident'; herpune v. 'to spear': ale v. ou  $di\hat{g}e$  'to go fishing with a spear') plaice and other flatfish, or go shrimping in the open sea or in the rock pools (hav f. 'shrimping net')<sup>1</sup>.

In the pools  $(ma\partial f.)^2$ , conger eels and lobsters are sometimes found lurking in crevices and holes (known as  $hul f.^3$ ; hule v. 'to probe for lobsters and eels in these holes'), from which they are dislodged with the aid of a tool known as a  $has f.^4$ , consisting of a short pole to which is lashed an outsize fishing hook ( $\tilde{\ell}$  m.). Lobsters and crayfish were also sought in the gaps and hollows which occurred in the fields of marine grass ( $la \ pl\bar{\imath}z^5$  'Zostera marina':  $\tilde{o}n \ erbi$  m., pl. erbyer – 'field of marine grass', C. 1. kauddol, J. 1. kougdol f.<sup>6</sup> 'hollow in field of marine grass', C. 1.

<sup>1</sup> Back-formation from masc. *havenel* attested in Guernsey and Alderney as well as in Normandy: cf. *FEW* XIV, 112, Old Norse HAFR-NET.

<sup>2</sup> Equivalent of Fr. *mare*:  $\partial$  in the dialect derives in all cases from intervocalic *r* (or in some cases *rr*). Assibilation > *z* and assimilation to consonant in contact also take place under certain conditions – cf. N 6.

<sup>3</sup> Similar forms in West French (*vide REW* 4166 – Anglo-Saxon HOL).

<sup>4</sup> Vide *FEW* IV, HASTA. The sense of the Norman *hanse* is generally that of 'scythe handle'.

<sup>5</sup> From Lat. PILOSA, with change of suffix.

<sup>6</sup> This word was also applied by some informants to fruit which has fallen before reaching maturity. In the latter sense it was closely related to the verb ekaude (of plants, fruit) to fail to reach maturity' (cf. Middle Fr. echauder, 'avorter (fruits, plantes)'; a form kauderol would become kauddol in the dialect through the 'accommodation' of r to preceding consonant (cf. letti f. 'dairy', *il ãtãdda* 'he will wait', etc.), but the resulting group dd seems to have dissimilated to gd in this word and probably in the word

# N. C. W. Spence

 $e \partial q n$  f.<sup>1</sup> 'small hollow, bare patch in field of marine grass'). Holes formed at the edges of the hollows, among the matted roots of the grass, and it was in these that the lobsters sought refuge. This type of lair was called not a *hul* f., but a *veiz* f.<sup>2</sup>, and the verb *veize* (R. 1., C. 1) was applied to its exploration.

A shellfish which is far more sought after than the common winkles, whelks or cockles (for the names of the shellfish of the Island *vide infra* pp.21–2), is the 'ormer' or haliotis (*auris marina*), an ear-shaped shell found only on extremely low tides, wedged in narrow rock-crevices. The only implement required for 'ormering' is a short iron hook flattened at one end (*kro* m. *a ormer*) used to prise the shellfish off their rocks.

# III. Boats (bate m., pl. baĉau)

The boats in service are a mixture of English-, French- and Island-built craft. The latter are probably now in the minority; when one of them is withdrawn from service, it is replaced, if it is replaced at all, by an imported boat. The Jersey boat is an open craft varying in length from about twelve to twenty feet (for some reason fishermen frequently call it a tręzpi or 'thirteen-footer', regardless of its exact length); decked craft of about 30–35 feet ( $k \rho t \ddot{\rho} r$  m. – 'cutter') used to be found at Gorey where they were used for trawling (tr ale v. 'to trawl') and oyster-dredging ( $dra \hat{g} i$ v.  $p \mu r dz \bar{\imath} tr$  'to dredge for oysters'). The smaller boat is a sturdilybuilt craft with a very broad beam (leiz f.)<sup>3</sup> and deep draught for

 $s\tilde{a}gd\tilde{\rho}$  'lugworm' (vide N 3, p. 208). In the sense 'hollow in field of marine grass',  $kaudd\rho l/kaugd\rho l$  probably first had the sense of 'patch where the grass has withered'.

<sup>1</sup> The West Jersey form would be \* $e\delta en$ . The word could derive from Lat. ARENA, as there are a number of examples of the closure of a > e before intervocalic -*r*- (cf.  $e\delta a \tilde{n} \tilde{i}$  f. (WJ) 'spider's web', (EJ) 'spider, spider's web',  $he\delta a$  m. 'herring',  $e\delta e = Fr.$  'aurai', etc.), but the *FEW* does not mention any cognate forms in the Norman dialects.

<sup>2</sup> From Franconian \*wAso, the oblique case of which has developed to *gazon* in French?

<sup>3</sup> Cf. Old Fr. laise < L. LATIA. The beam is usually a third or

stability and safe handling. The bow is straight-stemmed, the stern of the transom type. Most local boats are carvel-built (*bate a rõd kwõtüð* 'carvel-built boat' – lit. 'round-seam boat': a clinkerbuilt boat =  $\tilde{o}$  bate a  $rky\tilde{e}$  – cf. Fr. *reclin*); the older boats are remarkable for the small number of planks used. A feature made necessary by the big tidal fall are the 'legs' (*legz* f.) – one on each side – which prevent a craft from falling over on to its side when it is left dry at its moorings. These legs are stowed (*šipe*<sup>1</sup> v. *le legz*) when the boat is under weigh.

All boats are now equipped with motors  $(\tilde{a}\check{z}\check{\varrho} m.)^2$ ; few ever use sail. Formerly they were cutter-rigged, with gaff and boom, or sprit and boom, or simply with a sprit.

Many men have a small dinghy (pti bate - literally 'small boat', dini m., pent m.) or flat-bottomed boat (pya fo m., flat m.)<sup>3</sup> for pulling to and from their moorings.

An unseaworthy dilapidated boat is called a  $ny \notin \partial pl$  f. (a derivative of the verb  $ny \notin$  'to drown' > L. NECARE) or a  $b \notin rk$  f. (which is also the name given to a barque).

# Parts of boat:

# (i) The hull.

cel f. 'keel', cerleg f. 'keelson'<sup>4</sup>, faus cel f. 'false keel' (not found on older boats), talõ m. 'heel (of keel)', eitān f.<sup>5</sup> 'stem, stempost', koyi m. (cf. Fr. collier) d la bauprē 'ring through which bowsprit is passed', mabr m. pl. 'ribs, timbers' (usually of elm, sweated into

over of the length – a boat I measured had a beam of five feet six inches, and a length of fifteen feet ten inches.

<sup>1</sup> Adaptation of English verb to ship in sense 'to take or draw into ship or boat'.

<sup>2</sup> Semantic calque of English *engine*?

 $^{3}$  dini, pênt and flat are pure anglicisms, although the use of the term pênt with reference to a dinghy is not normal in standard English.

<sup>4</sup> Cf. Fr. *carlingue*. C. 1 also mentioned the term *šųćę* m. (literally 'block of wood') 'block into which mast fitted'.

<sup>5</sup> Local development of Norse STAFN, with assimilation of praeconsonantal f to n.

### N. C. W. Spence

shape), vrag f. (cf. Fr. varangue) (R. 1, R. 2) 'ribs of boat', (J. 1) 'lower part of ribs', bordal f. 'planking, sheathing (of boat)' (usually of imported pine), pyätförm f. 'bottom-boards (literally 'platform')', maršəpi m. 'narrower bottom-boards fitted at bows and stern', aumað f.1 'locker used for storing tackle, cuddy', (R. 1) ursā m. 'bilge-channel' (cf. Fr. loussec, lousseau), nāby m. 'plug' (cf. Fr. nable), põp f. 'pump', bay m. 'bows' (0.1 le žoy f. pl. - literally = 'the cheeks'),  $dr \tilde{i} e \delta$  m.,  $\hat{c} \ddot{u}$  m. 'stern' (literally = Fr. derrière, cul), (C. 1, LR. 1) la grã rõ2 'the wide part of the boat', bā m. 'thwart', tolei, LR. 1, J. 1 tulei m. pl. 'thole-pins' (cf. Fr. tolets), tolceð, LR. 1, J. 1 tulceð f. pl. 'holes for thole-pins' (now replaced by swivel rowlocks - roulik, R. 1 rolik, C. 1 roliks, 0.1 rouliks, J. 1 rālik m. pl.); (R. 2, C. 1) skor f.3 'rounded groove cut in transom for single oar when sculling', bar f. 'tiller', guverna m. 'rudder', legz f. pl., R. 1 beĉil f. pl.<sup>4</sup> 'wooden supports (literally 'legs') fitted on either side of boat to prevent it from falling on its side when it is left high and dry by the fall of the tide'.

(ii) Masts and rigging<sup>5</sup>.

Boats were cutter-rigged, with either topsail and gaff, or spritsail, the latter being particularly favoured because it was easier to lower when the boat was fishing at anchor. The mast  $(m\bar{a} \text{ m.})$  fitted into a hole in the keelson, and was held to one of the thwarts by an iron clamp (R. 1  $kr\tilde{a}p$ , R. 2 klamp f.). Other spars  $(sp\bar{e}r \text{ f.})^{\epsilon}$  were the bowsprit  $(baupr\bar{e} \text{ f.})$ , the boom (R. 2, G. 1  $b\bar{c}b$ 

<sup>1</sup> Vide FEW I, ARMARIUM. The word is applied only to the locker or 'cuddy' of a boat. In the ordinary sense of 'cupboard' it has been replaced by the form  $armwe\partial$ .

<sup>2</sup> The word is used in the dialect with the sense of 'room to move' – cf. phrase  $y \, a \, t u \, p y \tilde{e} \, d \partial r \tilde{o}$  'there is plenty of room'. Cf. Old Fr. run 'espace', Franconian RUM, *REW* 7435.

<sup>3</sup> Borrowing from English score in the sense of 'notch'.

<sup>4</sup> Borrowing from Fr. *béquilles*? It is only used in this sense: the dialect word for 'crutch' is *eikaš* f.

<sup>5</sup> Almost universally replaced by petrol engines.

<sup>6</sup> The terms  $m\bar{a}t\bar{o}z$ , EJ  $m\dot{a}tqiz$  f. 'masts and spars (Fr.  $m\dot{a}ture$ )' and verg f. pl. 'yards' are hardly applicable to small boats of this type.

f., R. 1, R. 4, C. 1, 0.1  $b\bar{q}m$  m.)<sup>1</sup> the gaff (ggf m.), and, on spritsailrigged boats, the sprit (spred f.)<sup>2</sup>.

The sails (vel f.) were the following:  $-gr\tilde{a}$  vel f. 'mainsail', vel f.  $d av\tilde{a}$  'foresail (or stay foresail)',  $\hat{g}ib$  f. (C. 1 m.) 'jib' (or 'storm-jib'  $= sakf\ddot{o}$  m.)<sup>3</sup>, and on a few boats, topsel m. 'topsail'.

Also connected with the sails and rigging (rigaž m.): - pik m. (d la vęl) 'peak (of sail)', gǫrž f. (d la vęl) 'throat (of sail)', pi m.<sup>4</sup> (d la vęl) 'clew (of sail)', rālēg f. 'leech, bolt-rope of sail', lǫf m. 'luff (of sail)', deilo m. 'cringle'<sup>5</sup>, īyę m.<sup>6</sup> 'eyelet (in sail)', pwę̃t f. a rīzi 'reefing point', amað f., amaðaž m. 'lashings (securing sail to boom etc.)', eikut f. 'sheets (of sail)', sęrky m. 'mast-hoop', isā m. pl. 'halliards', minawę m.<sup>7</sup> 'loop holding lower end of sprit against mast', puyī f. '(block and) pulley', dubyə puyī f. 'double blocks'.

# Accessories, repair materials: -

aviðộ m. 'oar' (la pẹl də  $l \sim$  'the blade of the oar'), gaf f. 'boat hook', deifās f. 'fender',  $\hat{g}iš$ ộ m.<sup>8</sup> 'bailer' (G. 1 püšai m.)<sup>9</sup>.

påñį m. a doų 'fisherman's wicker basket (Fr. 'panier à dos)', *wile*į m. pl. 'oilskins', *korsę* m. d *övr* 'jersey (usually blue) worn by fishermen'.

<sup>1</sup> Early adaptation of English 'boom'? The form  $b\tilde{\rho}b$  was also applied by certain dialect-speakers to the bung of a cask. If this is an adaptation of dialectal English *bum* 'bung', as I believe, there appears to have been a tendency to render lengthened English *m* by an articulatory effort leading to closure and plosion of the last element.

<sup>2</sup> The term *spread* is used for 'sprit' in local English, and is the source of the dialect word.

 $^{3}$  < ? I have not found any cognate forms for this term.

<sup>4</sup> Literally = 'foot'.

<sup>5</sup> Brass ring sewn into corner of sail. For dialect form *vide FEW* III, DIGITALE, in particular p. 76, N 4.

<sup>6</sup> Vide *FEW* VI, oculus.

<sup>7</sup> Cf. nautical French *minahouet* 'appareil pour raidir un cordage' (Willaumez), a variant of Fr. *minol* 'pièce de la proue du navire portant une poulie où passe l'amure de la voile de misaine' (*DGén.*), both of which appear to be derivatives of Breton MIN 'beak' (*vide REW* 5582).

<sup>8</sup> The word was also given the sense of 'wooden bowl' by another informant. It is found in the Norman dialects: cf. Bessin, Val de Saire *guichon* 'tasse en bois', Hague *guichon* 'vase à boire en terre'.

<sup>9</sup> Derivative of verb püši 'to draw (water, etc.)'.

# N. C. W. Spence

filę m. 'rope'<sup>1</sup>, dwǫl f. də filę 'coil of rope', merle m. 'marline',
(R. 1, C. 1, J. 1) merləspik, (R. 2, 0.1) merləspi, (R. 4) merlespik,
(LR. 1) merləspik m. 'marline-spike', aĝül f. a kwǫtr 'seaming-needle (= Fr. aiguille à coudre)', aĝül f. a rālēĝi 'roping-needle',
paume m. 'sailmaker's palm (cf. Fr. paumelle)', fid f. 'fid (tool used for splicing rope)', eitup f. 'oakum (used for caulking seams of carvel-built boat)', tað f. 'pitch (used for sealing seams)',
koulter f.<sup>2</sup> 'coal-tar, creosote (painted on wood to preserve it)'.

### Repairs, maintenance: –

ergreį<sup>3</sup> v. 'to repair', ergrįaž m. 'repairs', kalfeite v. ön kwǫtüð 'to caulk a seam', taðe v.  $\tilde{o}$  bate 'to caulk seams of boat with pitch (after packing them with oakum)', koultēre v. 'to treat with creosote', eipisi v. 'to splice (rope)', eipisǫz f. 'splice' (lõg ~ 'long splice', kurt ~ 'short splice'), gaufre<sup>4</sup> v. ön deifās 'to cover a fender with a woven net of cord', dwǫyi v. dü filē 'to coil rope', kwǫtr v. 'to sew', rālēĝi v. 'to sew bolt-rope round sail', feð v.  $\tilde{o}$  nǫ (EJ nǫ, pl. nöŭ) 'to tie a knot, knot together's: nǫ m. d rigaž 'shroud knot', nǫ m. d boulin 'bowline knot', pya nǫ m. 'reef knot', pwei m.<sup>6</sup> 'spliced loop', nǫ ā kū d pulẽ 'slip knot'.

<sup>1</sup> The word seems to be used only by the maritime community; other speakers talk about  $k \rho r d$  f.

<sup>2</sup> The form  $ta\partial$  is paralleled by Guernsey *tare* f. 'goudron'; the assibilation of r shows that it is an earlier borrowing than  $koull\bar{e}r$ ; in any case the expression 'coal-tar' in English dates only from the early 19th century.

<sup>3</sup> rgrei after word ending in a vowel. For sense development, vide FEW XVI, GREIDA.

<sup>4</sup> Cf. French gauffrer with same sense (due to comparison between the pattern of the weave and that of a gauffre).

<sup>5</sup> The verb  $n\mu e$  is little used (although I have heard it) because of the danger of confusion with  $n\mu e$  v. 'to swim' (< V. L. \*NAUTARE), which is itself tending to be replaced by naži under the influence of standard French nager. Confusion with naži 'to row a boat' is not likely because the unambiguous fuller forms  $naži l bate, naži \delta bate$ are nearly always used. I did not hear the word nouachir 'nouer' mentioned in the Glossaire du patois jersiais.

<sup>6</sup> Cf. Hague *pouais* 'nœud en rosette', Guernsey *pouais*, Percy *pouet* 'nœud coulant'; < ?

### IV. Harbours (hāvr m.), Moorings (mwǫre m. pl.)

Most of the island's bays are provided with a solidly built granite breakwater (kausi, f.) offering a certain amount of protection against storms. Each has a small granite shed ( $la \ barak$ )<sup>1</sup> for storing tackle and supplies, and in the more exposed bays there is a crane ( $kran \ f. - EJ$  usually kran) for the raising and lowering of boats.

When not in use boats are generally moored ( $ama \partial e v$ .) in the shelter of the pier. Moorings ( $mw \bar{\varrho} r \tilde{e}$  m. pl.) are adapted to local conditions. On the sandy bottoms of the southern and eastern coasts an ordinary anchor would not hold, so safe moorings have to be made by burying heavy blocks of stone, lengths of chain, or metal plates (burying a 'dead man')<sup>2</sup>. On rock or pebble bottoms an anchor ( $\bar{a}kr$  f.: pat f. 'prong', žwe m. 'stock') or grapnel (grap  $\tilde{e}$  m.) can be used with comparative safety<sup>3</sup>. In most cases a boat is on an 'endless rope' (R. 1, C. 1  $\tilde{o}$  va e v $\tilde{e}$ ; literally = Fr. un va et vient) which runs through a block on the anchor-rope ( $ama \partial$  f.  $d \ l \ akr$ ,  $k \overline{a} by$  m.,  $h \overline{a} sy e \partial$  f.)<sup>4</sup>; with this arrangement a boat can be pulled in to the embarkation steps, or returned to its moorings after disembarkation.  $l \geqslant b \ u \ d \ l \ ava$  'the forward mooring (tied to bows)'; bos f. 'painter (of dinghy)'<sup>5</sup>.

<sup>3</sup> For fishing at anchor, a heavy stone lashed into place inside a wooden fork is frequently used as an anchor; this appliance is known as an *erš* f. (*vide FEW* IV, 431a, HIRPEX).

<sup>4</sup> Generally applied only to a thick ship's hawser. The  $\tilde{a}$  of  $h\tilde{a}sye\delta$  is probably due to association with the word  $h\tilde{a}$  m. 'galingale (*Cyperus longus*)', a plant formerly used locally for making ropes.

<sup>5</sup> Cf. Fr. *bosse* with similar sense: (*DGén.*) *bosse* '... 7<sup>o</sup> Par ext. (Marine) cordage, terminé par de gros nœuds, fixé par une de ses extremités sur un point de navire...'.

<sup>&</sup>lt;sup>1</sup> I only heard the word *barak* used in this connection; the usual word for 'shed' is  $ap\tilde{a}t\bar{i}$  m. and f. (or denasalized form  $apot\bar{i}$ );  $e\bar{i}tr$  f. 'storeroom' (< L. EXTERA),  $cerkad\bar{i}$  f. 'cartshed', etc., are other 'special' terms.

<sup>&</sup>lt;sup>2</sup> LR. 1  $\tilde{o}$  kor mor – a calque of the English term? J. 1  $\ddot{o}n$  lūwis (borrowing from English *lewis* 'iron contrivance for gripping heavy blocks of stone, etc.').

# N. C. W. Spence

Nearly all craft are laid up (R. 1  $e_i \check{s} \check{u} e$  v. – literally 'to beach', R. 2 ramõte v., C. 1 metr a ter) during the winter months, and launched again ( $l \check{a} \check{s} i$  v.) in the spring.

#### V. Seamanship and Navigation

s aberci refl. v. 'to embark', aberci v. 'to take on board', naži v. ( $\delta bate$ ) 'to row (a boat)', gabade v.<sup>1</sup> 'to scull, single-oar', guverne 'to steer', vele v. 'to sail', (R. 2) bende v.  $le vel^2$  'to attach sails to spars, mast', haiste v. le vel 'to hoist the sails', paci v. le vel 'to furl the sails', deipaci v. le vel 'to unfurl the sails', rizi v. le vel 'to reef the sails' (pradr v.  $\delta ri$ , 'to take in a reef'), leve v. 'to tack' vide v. le vel 'to stay (put over to opposite tack)', (LR. 1) arive v. 'to keep head of boat out of wind': swolds lva 'on the lee side', ou va 'to windward'.

prādr v. de mer 'to take bearings' (mer m. 'landmark',  $bw\bar{i}$  f. 'buoy'),  $a\check{z}\ddot{u}ste$  v. (or  $fe\eth$  v.)  $\ddot{o}n$  kurs 'to set a course',  $erla\check{s}i$  v. 'to run back to shelter',  $\tilde{a}$  rlāš f. 'weather-bound',  $\tilde{a}$  kap f. 'laid-to'.

lei m. 'ballast', (R. 2, C. 1 swǫ lei, R. 1, LR. 1, O. 1  $\tilde{a}$  lei 'in ballast'), leite v. 'to take on ballast', deileite v. 'to take off ballast', saumõ m. pl. 'iron ballast ('pigs' – cf. Fr. saumon)', ave v. d la list 'to have a list' (C. 1 liste 'listing'); pa l nē 'down by the bows (literally = 'by the nose')', pa l ĉü 'down by the stern';  $\tilde{a}$  trim<sup>3</sup> 'on an even keel', trime v. 'to trim ship'.

a fyọ 'afloat', afyųę v. 'to become water-borne'; fyǫtę v. 'to float'; eįšųę v. 1. 'to beach (a boat)', 2. (intrans.) 'to run aground',
3. (intrans.) 'to be grounded by the fall of the tide'; ertiðe v. ... pī d yaų 'to draw ... feet of water': prādr v. (or feð v.) d yaų 'to leak' (R. 1 lə bate fe d yaų kųm õ pånį 'the boat is leaking like a sieve' – literally 'like a basket'), kųlę v. 1. 'to leak', 2. 'to sink', verse v. 'to capsize, drive v. 'to drift'; ā driv f. 'adrift', tūe v. 'to tow'. vaðaž<sup>4</sup> m. 'flotsam and jetsam'.

<sup>1</sup> Vide *FEW* II, CARABUS.

<sup>2</sup> Adaptation of English to bend 'attach with knot (cable, sail)'.

<sup>3</sup> Calque of English in trim.

<sup>4</sup> I have not been able to find any mention of cognate forms in the Norman dialects or in O. Fr.; der. of L. VARARE 'to cross water'?

### VI. Sea, Coast and Tide

me f. 'sea', d la saus 'sea-water', (d yau) saumat 'brackish (water)', mað f. 'pool'.

kout f. 'coast', bei f. 'bay', pwęt f. 'headland', kav f. 'cave', gręv f. 'beach' (Gorey pyā m.)<sup>1</sup>, sabyõ m. 'sand', galo m. (pl. galou) 'pebble', segy<sup>2</sup> m., J. 1 gališ f. 'shingle'; bā m. d sabyõ 'sand-bank', de sabyõ bwožā m. pl. 'quicksands', vāz f. 'black sand or mud'<sup>3</sup>.

/õ m. '(sea)bottom', d la grön<sup>4</sup> f. collective 'rocks' (also ön grön 'a rock'), roci m. (pl. rocer) 'rock', përõ m. 'small rock (or small 'head' of rock showing above water)', teit f. 'rock «head» showing above water', bār f. d rocer, bā m. d rocer 'reef', fouse m. 'perpendicular rock wall (literally 'bank')', kane (EJ kåne) m., šna m., pāsaž m., ātrədö (EJ ātrədai) m. 'channel (between rocks)'.

 $lw\bar{q}m$  (NEJ, SEJ  $lw\bar{q}m$ , LR. 1, C. 1  $w\bar{q}m$ ) f.<sup>5</sup> 'wave, breaker', (*ptit, grãd*) *pyęš* f. d 
i me f. '(small, big) wave', *y a d la me, la me ei*  $\ddot{v}$  *myo sü l rüd* 'the sea is a bit rough', *y a d la lop* (0.1 *lap*)<sup>6</sup> 'the sea is choppy', (R. 1) *y a dü lapotẽ* 'the sea is a little choppy', *la me e kurt* 'there is a short (i. e. choppy) sea'<sup>7</sup>, (R. 2, C. 1) *la me lãfr* 'the tide is running strongly, the tide is swirling', (R. 1, R. 2) *lãfrei* m. 'swirl, heavy run of tide'<sup>8</sup>, (R. 1, C. 1) *halã* m. 'run of

<sup>1</sup> The WJ equivalent would be  $py\tilde{e}$ , and the word would appear to derive from L. PLANUM.

<sup>2</sup> Distortion of the English word *shingle*?

<sup>3</sup> Formerly often collected by farmers and used as a fertiliser because of its high lime content.

<sup>4</sup> Vide FEW XIV, GRUNN (Old Norse).

5 A cross between Fr. lame and Engl. wave?

<sup>6</sup> Borrowing from English lop = 'breaking of water in short lumpy waves'; English  $\varrho$  has been adapted as a in some dialect words (e.g.  $kap\ddot{\varrho}r$  'copper in which clothes are boiled'), as here in the forms given by 0.1 (lap) and R. 1 ( $lap\varrho t\tilde{\varrho}$  m.).

<sup>7</sup> Calque of the English expression?

<sup>8</sup> LR. 1  $l\tilde{a}/rei$  or  $\tilde{a}/rei$  m. 'spray' (cf. also Glossaire du palois jersiais, lan/rais s. m. 'embrun'). R. 1 gave the word lap for 'spray' (other subjects applying it to 'choppiness of sea'), suggesting that the idea is not clearly dissociated from the water movements which produce it. I have not been able to trace any forms related to  $l\tilde{a}/rei$ .

# N.C.W.Spence

tide, undertow'<sup>1</sup>, *kwoðā* m. 'current', *rā* m. 'race'<sup>2</sup>, (R. 1) *deilaši* v.<sup>3</sup>, *deibāre* v., *kaple* v. i.<sup>4</sup> '(of rocks) to uncover', *trāĉil* 'calm'.

#### Tides: -

maðē f. 'tide', la dmye mõtē f. 'half-flood', la dmye rtret f. 'half-ebb', la dmī, la maðē a dmī 'half-tide', la me haut, lə hau d yau,
C. 1 lə pyë 'high tide', la me bās, lə bā d yau 'low tide', fyo m., mõtā
m. 'flood (rising tide)', ertiðā m. 'ebb', mõte v. 'to rise (of tide)', ertiðe v., dvale v. 'to ebb (of tide)'.

pwoñā m. 'springing tide', mẹ d ẹrciā m., ẹrciā m.<sup>5</sup> 'neaping tide', eicinok f. pl. 'the Equinoxes', grā m. d yau 'spring tide', morcau f. 'neap tide'; la mẹ pwẽ, la mẹ rpwẽ 'the tide is springing'<sup>6</sup>.

#### VII. Fishing Tackle

# (i) Pots (kyavę m., pl. kyavyaų)<sup>7</sup>.

The most important items in the equipment of every local fisherman are the various types of wicker pot<sup>8</sup> which he baits and

<sup>1</sup> Derivative of verb hale 'to pull' (< O. Norse HALA).

<sup>2</sup> Applied particularly to *l*> *rā d priñi* 'the Race of Alderney'.

<sup>3</sup> Mentioned in the *FEW* among the derivatives of V. L. \*LAXI-CARE, to which, unless it is phonetically irregular, it cannot belong – \*LAXICARE >  $l\bar{a}\check{s}i$ . Phonetically, it could be a derivative of V. L. \*LACEARE, and a metaphorical 'untying' of the rocks as the tide falls appears an adequate, if not completely satisfying, explanation of the sense development.

<sup>4</sup> Vide *FEW* II, CAPPELLUS.

<sup>5</sup> From present participle of verb ercei 'to fall again' (*re-* + cei < V. L. \*CADERE, used substantivally).

<sup>6</sup> C. 1 also *la me ã fę* 'the tide is springing (literally 'making'), *la mẹ ã pẹr* 'the tide is neaping (literally 'losing')', *lãši* v. 'to spring (of tide)'.

<sup>7</sup> The word  $\lceil clavel \rceil$  or  $\lceil claveau \rceil$  is not attested in this exact sense in the *FEW* under either L. CLAVA or L. CLAVELLUS, although several possible lines of semantic development suggest themselves.  $\lceil Clavel \rceil$  or  $\lceil claveau \rceil$  from L. CLAVELLUS was specialized in several technical senses – 'ring of coat of mail' (in Poitou and Saintonge also 'ring put in pig's snout') and 'fishhook' (and by extension 'various types of fish-hook' or 'type of line fitted with fish-hooks'): the continuant of CLAVA and its derivatives  $\lceil clavel \rceil$ ,  $\lceil claveau \rceil$  have

## Jersey-French Fishing Terms

sets for lobsters, crayfish and spider-crabs, and to a lesser extent for wrasse, prawns and whelks.

Many fishermen still weave their own pots ( $ye^1 v$ .  $\ddot{o} kyave$  'to weave - literally 'to tie' - a pot'); each takes several hours to make. The mouth of the pot (yi m. = literally 'the eye', LR. 1)la gul, l anou m.) is made first; lengths of young, pliable willow (d l ouzi, 0.1 ouzyi m.) are inserted into a circular series of holes pierced in a flat, round piece of wood known as  $l \ge m \bar{u} l$  ('the mould'). Then thin willow (known as la yereis)<sup>1</sup> is interwoven between the uprights to a height of about five inches<sup>2</sup>. This portion forms the mouth. The uprights (verg f., verget f. pl., J. 1 kout f. pl. - literally 'ribs') are then bent outwards and downwards to the shape of an inverted pudding-basin, and held in place with the aid of a hoop (serky m.) until the completion of horizontal ties (R. 1, R. 2 yęreis f., J. 1 yį f., LR. 1 kordo m.)<sup>3</sup> which hold the uprights in position. The flat, round bottom ( $f\tilde{\rho}$  m.) of the pot is made separately of elm sticks (da l orm m. or f.) closely interwoven with willow, and strengthened (raforši v.) below by a further row of heavier cross-bars (C. 1 dü rafor m. 'strengthening, reinforcement') in order to reduce the effects of dragging on the sea-bed. The final stage is the joining of the body and of the bottom. Some fishermen also fit their pots with a wicker handle (hån f., LR. 1 har m.)<sup>4</sup>, and an opening for a small trap-door

been applied, particularly in Norman, to a variety of wooden bars, poles and wedges. None of these senses is very close to the Jersey one, yet none is impossibly distant from it; the *kyave* is an *'engin de pêche'*, even if it does not involve fish-hooks; its main feature is a ring-shaped mouth, and finally it is constructed of lengths of elm and willow.

<sup>8</sup> Many of them are now makeshift contraptions of wire and wire netting.

<sup>1</sup> Derivative of L. LIGARE (> ye).

<sup>2</sup> In the case of the larger lobster and crab pots.

<sup>3</sup> LR. 1 korde v. 'to weave the ties'.

<sup>4</sup> han (EJ hån) f. is the usual name for 'handle (of cup, jug, basket)' (>?) but this was the only time I heard the word har. Vide FEW XVI, HARD.

#### N.C.W.Spence

(R. 1, LR. 1 kyiše, C. 1 kiše m.<sup>1</sup>, J. 1 trap f.) to facilitate the removal of the catch.

The two main types of pot are the lobster-pot (kyave a humar)and the crab- and crayfish-pot  $(kyave a pihan \text{ or } kyave a krabako)^2$ , which are of the same size but have mouths of different sizes: 5-6 inches in diameter in the case of the former, but 9 inches in the case of the latter. Smaller and less common types are the wrasse-pot  $(kyave a vr\bar{a})$ , the prawn-pot  $(kyave a \ servet)$ , and, at La Rocque, the whelk-pot  $(kyave a \ kokluš)$ .

Pots are usually set (mętr lę kyavyaų bā – literally 'to put the pots down') near the coast in 10–12 fathoms (braš f.) of water, but they have been used in depths of up to 36 fathoms. In most of the bays they are set separately weighted with stones (pęrę v., pyęrę v.) and each attached to a surface line (EJ haulin, NEJ haulen f.<sup>3</sup>, SEJ bāde m.<sup>4</sup>, WJ kāby m.) buoyed up by cork floats (yęž m., fyqt f.)<sup>5</sup> every three fathoms, and ending in a larger float (described variously as R. 1, R. 4 la fyqt. J. 1 la teit də fyqt, LR. 1 la teit dü bāde, C. 1 la bwī), often provided with a small flag or other distinguishing mark<sup>6</sup> to facilitate location and identification.

On relatively clear bottoms it is possible to drop groups of two or three pots linked by ten-fathom lengths of cord, with a single surface line ( $\ddot{o}n \, \check{z}w \ddot{e} \, d \, ky avy a \, \check{u}$  'group of linked pots',  $de \, ky avy a \, \check{u} \, \check{a} \, \check{z}w \ddot{e}$  'linked pots')<sup>7</sup>.

<sup>1</sup> Adaptation of Fr. *guichel*; the autochthonous form is preserved in the word *viĉę* m. mentioned by other subjects for 'trap-door', 'door of pig-sty', etc.

<sup>2</sup> The names of fishes and crustacea are listed on pp. 209-214.

<sup>3</sup> Appears to be a reduction of haut lin (= Fr. haute ligne); L. LINEA > lin (len in NEJ) through depalatalization of  $\tilde{n}$  in secondary final position (cf. vin, NEJ ven f. də patat 'potato haulm').

<sup>4</sup> Dialect equivalent of Fr. bandeau.

<sup>5</sup> yęź m. (Fr. liège) refers specifically to a cork float, while fyqt is a general term.

<sup>6</sup> Usually called a *mę̃r* m. ('mark, marker'), regardless of type.

<sup>7</sup> Derivative of  $\check{z} \check{u} \check{e} < L$ . JOCARI in sense of 'to move freely'? Vide FEW V, 40a. Alternatively,  $\check{z} w \bar{e}$  may be a feminine derivative of L. JOCUM in its collective sense (cf. Fr. *un jeu de cartes*). I have not found any example of the word *jouée* used elsewhere in this particfular sense of 'group of pots'.

Twice a day, at times varying with the state of the tide, the fishermen go out to inspect their pots (*kyavte, kyavte v.*, SEJ *marāde v. se kyavyau*<sup>1</sup> 'to see to one's pots': *lve v. le kyavyau* 'to haul up one's pots').

Captured lobsters and crayfish are often kept for a while in large coffin-like wooden boxes (known as  $nw\bar{\rho}ris$  f. pl. – literally 'wet-nurses') moored out in the bays.

# (ii) Nets (drang m., pl. dranei)<sup>2</sup>

Only two types of net are in common use: the first is the 'set net' (R. 1 LR. 1, O. 1 *rei* f. pl., G. 1 m. pl.)<sup>3</sup> placed across a tidal gully at low water, and later stretched taut to trap the fish which have entered it with the rising tide: the second is the trammel (*tramā* m.) consisting of a small-meshed inner net (*ptit męš* f., R. 4 *ptit męl* f. 'small mesh')<sup>4</sup> and two outer nets of a larger mesh.

Occasionally a seine  $(s\bar{q}n, SEJ, NEJ s\bar{q}n f.)$  is used in shallow water for netting smelts  $(s\bar{q}ne, EJ s\bar{q}ne v. 'to net with seine')$  or other small fish. A little trawling is also still done in the Bay of Grouville  $(tr\bar{a}le v. 'to trawl', tr\bar{a}l f. 'trawl': b\bar{p}m m. 'beam of trawl', fyer m. pl. d$ la tral<sup>5</sup> 'iron fittings at either end of beam, to which net is attached').

<sup>1</sup> The presence of unassibilated -r- in the word marãde, in the speech of two persons who normally assibilated intervocalic -r-, without the lengthening of preceding vowel which usually occurs before retained r (cf.  $b\bar{a}r$  f. 'bar',  $k\bar{a}re$  m. 'square', etc.), would suggest that this is not an autochthonous form, but I have not been able to trace any similar dialectal French or English word from which it might have been borrowed.

<sup>2</sup> Cf. FEW III, DRAGNET (English), which shows that the word is current in the Norman dialects (under form *dranę*, *dranē*, etc.), but retaining sense of 'dragnet', whereas in Jersey it is now the general term for 'fishing net'.

<sup>3</sup> Normally used in the plural, like Fr. *rets*, but LR. 1 also mentioned the singular form ( $\ddot{o}n re\dot{i} d b\bar{a}ra\dot{z}$  'a set net'). C. 1 was unable to decide whether the word was feminine or masculine, as he never used the singular.

<sup>4</sup> męl f. is the usual word for the link of a chain (< L. MACULA), but R. 4 was the only subject to use it in this connection, and it is difficult to know whether his reply reflects genuine usage.

<sup>5</sup> Literally 'irons' (cf.  $\tilde{o}$  fe d žva, de fyer d žva 'a horse-shoe, horse-shoes').

2

When oyster fishing was still carried on, a dredge (drag f.) was pulled along the sea-bed, scooping up  $(dra\hat{g}i v. dz itr 'to dredge oysters')$  oysters as it went.

tādr v. de dranei 'to set nets', hale v. ou dranei 'to haul in nets', lve v. de dranei 'to lift (stationary) nets'; ergrei v. de dranei 'to repair nets', tane v. de dranei 'to «tan» nets (i. e. camouflage and preserve them with tā m., a dye made from a kind of bark)'.

# (iii) Fishing-lines (lin, NEJ len f. do peik)

The main types of line used by the professional fishermen are: -1. The weighted 'flow-line' towed after a moving boat (*lin*, NEJ *len* f. d 
i fy 
i; a horse-hair line of this type =  $\ddot{o}n \ lin \ d 
i \ kr \ddot{e}$ ).

2. Conger-eel trots (thick lines laid parallel to the sea-bottom, with snoods and hooks at intervals, known collectively as d l apyem.)<sup>1</sup>. The trot is moored at either end by a fairly heavy stone (called a  $w\bar{q}ne$  m., pl.  $w\bar{q}nyau$  by R. 1, R. 2)<sup>2</sup> attached to a short anchor-line. Snoods (R. 1, C. 1 linnõ, LR. 1 linnõu, R. 2 limnõ, O. 1, G. 1 liñõ m.)<sup>3</sup> are attached to the main line<sup>4</sup> at intervals of about three fathoms. Because of the strength and ferocity of the conger, the upper part of the snood is of doubled cord (whence its name,  $l \partial duby$ ) while the lower part (eršo m.)<sup>5</sup>, to which the hook ( $\tilde{e}$  m.) is attached, consists of four strands of cord. Like the lobster-pots, trots are linked with the surface by a buoy-line

<sup>1</sup> Vide *FEW* I, APPLICTUM.

<sup>2</sup> The WJ form would be  $w\bar{q}n\check{e}; < ?$ 

<sup>3</sup>  $li\tilde{n}\tilde{\rho}$  and  $linn\tilde{\rho}$  (and variants) are derivatives of  $*li\tilde{n}\partial < L$ . LINEA. The first form does not call for comment, but it is perhaps necessary to say a few words about the latter. It would appear to be the local development of a form  $*li\tilde{n}\partial r\tilde{o}$ ; with the fall of 'mute e',  $\tilde{n}$  in contact with following consonant probably depalatalized to n (cf. development of verb kyinte, a derivative of V. L. \*CLUDINIARE) and weakened r was assimilated to the n as in the words  $p\check{a}nn\bar{e}$  f. 'basketful' (Fr. panerée),  $kwosunn\bar{i}$  f. 'bungled piece of work' (Fr. cochonnerie). The form  $limn\tilde{\rho}$  is presumably the result of a dissimilation of nn > mn.

<sup>4</sup> Not usually distinguished from lapye – but cf. J. 1 lased lapye(originally borrowed from Fr. *chef*?)

<sup>5</sup> Derivative of L. HIRPEX = vide FEW IV, 431 a.

ending in a large distinctive float (R. 2  $bw\bar{i}$  f. – literally 'buoy', R. 1, R. 4 fypt f. d appe).

3. 'Bay-lines' (as they are called in local English) consist of thinner line, with hooks at intervals, laid in shallow water about a foot from the bottom to catch plaice, Pollack whiting and garfish. The dialect name  $beil\bar{\ell}$  f.<sup>1</sup> ( $\sim a y\bar{\varrho} = EJ \sim a y\bar{\varrho}\ddot{\mu}$ - 'whiting-line',  $\sim a py\bar{\varrho}$  'plaice-line') is normally used in the plural.

4. Ground lines (*lin*, NEJ *len* f.  $d \ni f \tilde{\rho}$ , LR. 1 kord $\vartheta d p i$  – literally 'foot-line') are used mainly for wrasse. The snood or snoods are attached to a small swivelling piece of bone or wood (known as  $\tilde{\vartheta} br \rho d \rho$ )<sup>2</sup> about four or five feet from the sinker ( $py \tilde{\rho}$  m.) at the end of the line.

 $\tilde{\varrho}$  (SEJ, NEJ  $\tilde{a}$ ) m. 'hook', *barb* $\varrho$  m.  $d \ni l \tilde{\varrho}$  'barb of hook',  $\hat{c} \ddot{u} l \varrho t$  f.  $d \ni l \tilde{\varrho}$  'butt of hook', R. 1, R.2, C.1 *bend* $\varrho$  v.  $\tilde{o}n \tilde{a}$  'to tie on a hook'<sup>3</sup>;  $\hat{c} \varrho \partial \varrho$  m.<sup>4</sup> 'wooden frame on to which line is wound'.

Fishing-rods  $(vaul f.)^5$  are not used by the professional fishermen. Bait (*d la bet*):  $-^6$ 

 $^{2}$  < ? The sense suggests a connection with O. Fr., Middle Fr. bort 'board' (< Franconian BORD), but no bordet derivative appears to be attested (vide FEW I, 438-9), and metathesis of bor-> brois not regular in the dialect (cf. bordāl 'planking of boat', bordōz, EJ bordaiz f. 'flower-bed').

<sup>3</sup> Adaptation of English to bend 'to tie'.

<sup>4</sup> Could be a variant development of Lat. QUADRATUM; the group kar- frequently >  $\hat{c}er$  (cf.  $\hat{c}erb\tilde{\rho}$  m. 'coal',  $\hat{c}erl\tilde{e}g$  f. 'keelson',  $\hat{c}e\delta w\rho n$  f. 'old, useless animal' (< V. L. CARONIA), etc., but not the group karr- ( $k\bar{a}r$  f. 'corner',  $k\bar{a}re$  m. 'square',  $k\bar{a}rye\delta$  f. 'quarry'), except where -*rr*- appears to have reduced early ( $\hat{c}e\delta\ddot{\mu}$  f. 'plough',  $\hat{c}e\delta ye$  v. 'to cart', etc.). If there was hesitation between \*kare and \* $ka\bar{r}e$ , the former would have developed to  $\hat{c}e\delta e$ .

<sup>5</sup> Cf. Fr. gaule (< Gmc. \*WALU): in Jersey the word appears to have been specialised in the sense of 'fishing-rod' and not to have retained that of rod in general.

<sup>6</sup> Vide FEW I, BEITA (Old Norse).

<sup>&</sup>lt;sup>1</sup> L. SAINEAN (Sources indigènes de la langue française II, 167) mentions West French belée 'corde flottante', but his derivation of the word from Old French baler with the sense of 'to float' is phonetically unsatisfactory, unless one admits the possibility of a change of vowel by association with, say, baie 'bay'.

## N.C.W.Spence

bętę v. 'to bait',  $d\ddot{u}$  šęrvę̃ m.<sup>1</sup> 'small salted shrimps thrown into the sea in order to attract mullet and other fish',  $\ddot{o}n$  fyāk (literally = 'a flank') 'shiny piece of mackerel or garfish taken from the tail end of the fish and used as bait on flowlines',  $d\ddot{u}$  ver m.  $dr q \check{c} i$ 'rock-worm, a kind of worm which makes its home in the crevices of a soft, crumbling rock found in some of the bays', verme v. 'to go «rock-worming»' (a small pick  $-\tilde{b}$  pikwei – is used to dig out the worms), byāš kat (EJ frequently kåt)<sup>2</sup> f. (R. 1 byā ka m.) 'type of worm found in sand at low tide (literally = 'white she-cat')', rwqž kat f. (R. 1 rwqž ka m.) 'red worm found in sea-gravel (literally = 'red she-cat')', R. 1, R. 2, R. 4, C. 1 sāgdõ m., I.R. 1, G. 1 sādõ m. J. 1 sādrõ m.<sup>3</sup> 'lugworm'.

#### VIII. Fishes, Mollusea and Crustacea

After giving a few general terms I have listed the names of fishes, and then those of mollusca and crustacea, in alphabetical order. I did my best to identify fish in the light of fishermen's descriptions and their recognition of illustrations<sup>4</sup>, but in a number of cases I was forced to accept the identifications given in

<sup>2</sup> Accented *a* frequently > a in N. E. Jersey, and sporadically in the rest of E. Jersey in emphatic speech.

<sup>8</sup> Sand-eels and certain flat-fish when buried in the sand are said to be  $s\tilde{a}dr\tilde{e}$  – if the word is a derivative of English sand, it appears likely that the names of the lugworm are also derived from it.  $s\tilde{a}d\tilde{\rho}$  and  $s\tilde{a}dr\tilde{\rho}$  are comparatively straightforward forms, but  $s\tilde{a}gd\tilde{\rho}$ is less so. If we postulate an original form  $*s\tilde{a}nd\tilde{r}\tilde{\rho}$ , the development is comparable to that of the form  $kaugd\varrho l$  which exists along with  $kaudd\varrho l$  (vide supra p. 193, note 6) –  $*s\tilde{a}nd\tilde{\sigma}r\tilde{\rho} > *s\tilde{a}dd\tilde{\rho}$  by 'accommodation' of weak -r- to preceding consonant,  $>s\tilde{a}gd\tilde{\rho}$  by dissimilation of the d's in contact.

<sup>4</sup> Those of L. JOUBIN and E. LE DANOIS, Catalogue Illustré des animaux marins comestibles des côtes de France et des mers limitrophes, 2 Vols., Paris, 1925 and 1928.

<sup>&</sup>lt;sup>1</sup> Back-formation from *šervęt* f. 'shrimp, prawn', with substitution of suffix - $\tilde{e}$ , which has collective, diminutive and usually pejorative value in the dialect (cf.  $d\ddot{\mu}$  frapl $\tilde{e}$  'small fry',  $d\ddot{\mu}$  krab $\tilde{e}$ 'collection of small, and therefore useless, crabs',  $d\partial l$  weizl $\tilde{e}$  m. 'flock of small birds', etc.).

# Jersey-French Fishing Terms

J. Sinel's list of the *Fishes of the Channel Islands*<sup>1</sup>, which sometimes mentions dialect names; in others I have been reduced to vague generalities of the type 'small redish fish'.

# (i) Fishes

General terms: -peisõ m. 'fish',  $m\ddot{\rho}l^2$  f. d peisõ (C. 1  $sk\rho l^3$  f. d peisõ) 'shoal of fish',  $d\ddot{u}$  fraplē<sup>4</sup> m. collective 'small fry';  $\hat{g}in$  (NEJ  $\hat{g}en$ ) f.<sup>5</sup> 'gills', eikred f. pl.<sup>6</sup> 'scales', finz (NEJ fenz) m. pl. 'fins',  $\ddot{\rho}vr^7$  f. pl. 'fish-roe',  $šivye\delta$  (or  $\check{s}\ddot{u}vye\delta$ ) f. a  $br\bar{a}$ , 'egg capsule of skate (literally = 'hand-barrow')'<sup>8</sup>.

Fish-names: –  $\tilde{a}\hat{g}\ddot{u}l$  f. 'conger-eel', J. 1  $\tilde{a}\check{z}$  f. 'angel fish, monk fish (Squalus squatina, Lin.)<sup>9</sup>', bar m. 'bass', R. 1 bavaį m.<sup>10</sup> 'variety of blenny', brām (EJ brām) f. 'fish known locally as «bream», but which is according to Sinel «old wife» (Cantarus lineatus, Gun.)', bril m. 'brill', broĉe (LR. 1 broše) m. 'picked dogfish (Galeus amanthius, Johnson)', NEJ bwoðe m.<sup>11</sup> 'bib (Gadus minutus, Lin.)', NEJ ĉã m.<sup>12</sup> 'lesser spotted dogfish (Squalus catulus, Lin.)', daufē m. 'dolphin', dmweizel f.<sup>13</sup> 'smooth hound (Squalus mustelus, Lin.)',  $\hat{g}ond\bar{o}ri$  m. 'John Dory (Zeus faber, Lin.)', SEJ fyabö m.<sup>14</sup> 'bib

<sup>1</sup> Transactions of the Société Guernesiaise, 5, 56-65.

<sup>2</sup> By extension from a phrase  $\ddot{o}n \ m\ddot{o}l \ d\vartheta$  with sense 'a lot of' (cf. Fr. 'un las de')?

<sup>3</sup> Borrowing from English school (cf. 'school of porpoises', etc.).

<sup>4</sup> Vide FEW III, 400b, FALUPPA 'strohfaser; wertloses zeug'.

<sup>5</sup> Vide FEW II, CIN. <sup>6</sup> Vide REW 7977, SKERDA.

<sup>7</sup> Cf. Guernsey *œuvres* f. pl. 'œufs de poisson', Old French *ove*, *ueve* 'collectif d'œuf' (GODEFROY); < L. OVA, with final intrusive r. <sup>8</sup> Cf. the English expression *skate wheel-barrow*.

<sup>9</sup> As in the case of *mwon* (vide in/ra), the name may have been suggested by the English of the questionnaire. Ange with the sense of Squalus squatina is not attested in the North of France, although

it is current in Provençal (vide FEW I, ANGELUS).

<sup>10</sup> Literally 'dribbler'.

 $^{11}$  < ? The fish has other names in SEJ (*fyabö* m.) and NWJ (*tabül* f.). Bib tend to congregate; a 'nest' of them is called *ön* bwoðceð (R. 2, C. 1) or *ön kõtrē a bwoðei* (R. 1).

<sup>12</sup> Literally 'dog' (cf. Fr. chien de mer).

<sup>13</sup> Vide FEW III, 134a, DOMNICELLA.

<sup>14</sup> Metaphorical extension of Middle French *flabel* 'éventail', from shape of fish?

#### N.C.W.Spence

(Gadus minutus, Lin.)', fyet f.<sup>1</sup> (J. 1 fyi) 'Allis shad (Clupea alosa, Cuv.)', fyau f.<sup>2</sup> 'skate (Raia batis, Lin.)', fyodr f.<sup>3</sup> 'flounder (Platessa flessus, Yar., Jen.)', grādou m.4 'smelt (Atherina presbyter, Guv., Yar.)', grõdẽ m. 'gurnard', halibo m. 'halibut', heða m. 'herring', horfi (LR. 1 orfi) m. 'garfish' (Belone vulgaris, Cuv., Yar.)', hay m.5 'tope (Squalus galeus, Lin.)', kabo m.6 'smooth blenny (Blennus pholis, Yar., Gun.)', kaplā, kaplē m.7 'cap(e)lin (fish of smelt family)', kare m.8 'horse mackerel (Trachurus trachurus)', C. 1 kat f. 'dab (Platessa limanda)?', ko m. 'crested blenny (Blennius gatturogine, Lin., Cuv.)', R. 1, C. 1 krapaų m. 'small inedible fish with large flattish head (literally = 'toad')', kukum. 'cuckoo wrasse (Labrus mixtus, Lin.)', lāšo m.º 'sandeel (the terms ver  $\sim$  and rwož  $\sim$  appear to refer to the greater sandeel – Ammodytes lanceolatus - and lesser sandeel - Ammodytes tobianus respectively)'10, le m. 'ling', lwos f. 'three-bearded rockling and five-bearded rockling (Motella tricirrata and Motella quinquecirrata)', makde m.11 'mackerel', mato m.12 (vide also ĉa m.) 'lesser spotted dogfish (Squalus catulus, Lin.)', LR. 1 mwon m. 'monkfish'13, mwoðų f. 'cod', mule m. 'mullet' (grī ~ 'grey mullet', rwož ~

<sup>1</sup> Cf. St. Malo *fleinte* 'Clupea alosa'.

<sup>2</sup> < ?

<sup>3</sup> Vide FEW III, FLUNDRA (Old Danish).

<sup>4</sup> Vide E. ROLLAND, Faune populaire de la France, III, 158.

<sup>5</sup> Vide FEW XVI, HAR (Old Norse).

<sup>6</sup> Vide FEW II, 346, N 5 for discussion of etymology of Fr. chabot, Pic., Norm. cabot.

<sup>7</sup> Latter form influenced by the English caplin.

<sup>8</sup> Vide FEW II, 1403b, QUADRUS.

<sup>9</sup> Dialect equivalent of Fr. lançon (der. of Lat. LANCEA).

<sup>10</sup> Vide infra twoš also.

<sup>11</sup> There are a number of phonetic variations of the word due to differing development of intervocalic -*r*-; in the plural the form was consistently WJ makəðyou, EJ makəðyau, except for C. 1's makəryau, but in the singular, in contact with k, -*r*- variously remained as *r* or assibilated to  $\hat{\sigma}$  (devoiced on occasion to  $\vartheta$ ) or *z* (devoiced on occasion to *s*).

<sup>12</sup> Variant of Fr. matou 'tomcat' (etymology obscure), used metaphorically? Vide alternative name  $\hat{c}\tilde{a}$  = literally 'dog'.

<sup>13</sup> Cf. Bessin mouene m. 'espèce de squale (Squatina angelus)'.

#### Jersey-French Fishing Terms

'red mullet'), perle m.1 'spotted wrasse (Labrus maculatus, Gun., Yar.)', purpei m. 'porpoise', pye f. 'plaice', rei f. 'ray skate', R. 1 ernar m. 'fish resembling trout (literally = 'fox')', rus f. 'great spotted dogfish (Squalus catulus, Lin.)'2, sard f. 'common sea bream' (Pagellus centrodentus, Cuv., Gun.)', sol f. 'sole (Solea vulgaris, Yar.) and lemon sole (Platessa limanda)', R. 1 šāneiz f.3 'fish of wrasse family (Acantholabrus exoleta, Yar., Jen.? Cf. Sinel, op. cit. p. 56)', šörk (R. 2 šerk) m. 'shark', O. 1 tabül f.4 'bib' (vide supra bwoðe, fyabö), R. 1 tābur m. 'small reddish fish (literally 'drum')', türbo (R. 3 törbo) m. 'turbot', twoš f. 'yellowish sandeel'5, viðlee m. 'yellow sculpin, dragonet (Callionymus lyra, Lin., Yar.)' R. 1 vyolo m. 'angel fish, monk fish (Squalus squalina, Lin.) (?),  $d \, la \, vn \bar{i} z^{7}$  f. collective 'name given to shoals of small silvery fish, known locally as whitebait, which Sinel (op. cit., p. 63) thought were young sprats', vra<sup>8</sup> (pl. vrā) m. 'wrasse in general, comber wrasse (Labrus vulgaris, Yar.) in particular', yö m. 'Pollack whiting (Gadus pollachius, Lin.)' (cf. regional Fr. lieu 'espèce de merlan', of which this is the phonetic equivalent).

Fresh-water fishes: -

There are few fresh-water fishes on the island – eels  $(\tilde{a}\hat{g}\ddot{u}l f, dyau dwos)$ , tench, sticklebacks and a few trout  $(tr\ddot{w}it f.)$  in the streams (kane, EJ kane m., du m.) and carp (karp f.) in the manorial fishponds (vivi m., pl. vivyer).

(ii) Crustacea

General terms: - krab f. 'crab', dü krabe m. collective 'contemp-

<sup>1</sup> Derivative of *perl* f. 'pearl', from appearance of spots?

<sup>2</sup> Cf. Fr. *rousset* 'chien de mer'. Named because of colour of skin.
<sup>3</sup> Adaptation of English *shanny* 'smooth blenny'?

4 < ?

<sup>5</sup> Believed by SINEL to be the female of the sandeel when full of roe (op. cit., p. 62); < ?

<sup>4</sup> Cf. Norman *virli*, *firli*, 'great weever and little weever', considered by PAUL BARBIER *fils* to be a derivative of the verb *virer* (RLR 63, 65).

 $^{7} < ?$ 

<sup>8</sup> Cf. Guern. *vrac* 'carpe de mer', Hague *vra(c)*, Bessin *vra* 'labre tacheté'. For discussion of etymology, *vide* BARBIER *fils*, *RLR 51*, 406.

tuous term for small crabs', eikal f. 'shell (of crab)', pēšet f. pl. 'pincers (of crab, etc.)'.

Names: – gręžeis f.<sup>1</sup> (or krab ~) 'velvet crab, lady crab' (Portunus puber, Leach), hųmar m. 'lobster' (vide also mwǫð f.), krab f. 'crab' (~gręžeiz 'Portunus puber'; vertə ~ 'shore crab' – Carcinus mænas, Pen.), krabako f.<sup>2</sup> 'crayfish', mwǫð f.<sup>3</sup> 'spawn-carrying female lobster', pihan (EJ pihån) f.<sup>4</sup> 'spider crab' (vide also WJ wǫl̃e m.), pwę̃kyoų m.<sup>5</sup> 'Cancer pagarus', sautiko m. 'sandhopper', sudar m. 'hermit-crab'<sup>6</sup>, O. 1 wǫl̃e m.<sup>7</sup> 'spider-crab'.

#### (iii) Mollusca

General terms: -vlik f.\* 'shellfish', eikal f. 'shell', kapüšõ m. 'operculum (of winkle, etc.)',  $p\ddot{p}p\bar{i}$ ,  $pep\bar{i}$  f. 'shell of cuttle-fish' (compared to tongue covered by scale of  $la \ pep\bar{i}$  'the pip'?)

Names: - bek f. də korbe 'mussel', banak (SEJ, NEJ banak) f.

<sup>1</sup> Derivative of V. L. \*GREVIARE, which becomes in Jersey grégir 'se mettre en colère'; this crab, though small, is fierce. Vide FEW IV, GRAVIARE.

<sup>2</sup> Cf. also Guernsey *crabe-à-co* 'langouste'. Could be taken literally as meaning 'the crab with the neck  $(k\rho m.)$ ', although this does not appear a very apposite name for the crayfish.

<sup>3</sup> The word WJ mwed, EJ mwod f. (< L. MORA) also means 'blackberry'. Is the sense 'spawn-carrying lobster' due to the dark colour of the lobster (which is not restricted to the female) or to some resemblance of the spawn to berries?

 $^{4} < ?$ 

<sup>5</sup> Cf. Norman *clopoing 'Cancer pagarus'*, from resemblance of crab to closed firt. *Vide FEW* II, 748, CLAUDERE.

<sup>6</sup> Literally = 'soldier': the crab is humorously compared with a soldier in a sentry-box.

<sup>7</sup> Cf. Guernsey haeuilin, houvlin, houblin, m. 'araignée de mer', Manche houlin 'Maia squinado', etc. (ROLLAND, Faune populaire, III, 226–7). P. BARBIER fils (Proceedings of the Leeds Philosophical Society, VI, 59) suggests that these and similar forms are diminutives of Old Norse HOFR 'hoof' (> houvel, houvelin, etc.). The Jersey form is obviously allied to the Norman ones, but derivation from HOFR would be difficult to explain ( $w\bar{g}$  would be expected to derive from lengthened  $\ddot{u}$  – cf.  $rw\bar{g}k$  f. 'hive').

<sup>8</sup> Adaptation of English *whelk* (pronounced *wilk*), or early borrowing from Anglo-Saxon veolc?

<sup>9</sup> Literally 'crow's beak'.

'barnacle', bāni (EJ bāni) m.1 'limpet', EJ bob f.2 'cockle', R. 1 brīoš f. 'razor-fish'<sup>3</sup> (vide infra māšo m.), eitel f. (or eitel də me) 'starfish', ītr f. 'oyster', WJ kok f. 'cockle', WJ kok f. a žvou 'dogwhelk' (literally = 'horse-whelk'), koklüš f.4 'whelk', kolifišyau m. pl.<sup>5</sup> 'queens', koune m.<sup>6</sup> 'cuttle-fish', māšo m. 'razor-fish', mūl f. 'mussel', ormer m.<sup>7</sup> 'haliotis (Auris marina)'<sup>8</sup>, R. 1 pato m.<sup>9</sup> 'queen' (vide supra kolifišyau), pövr, pörv f.<sup>10</sup> 'octopus', seš f. 'cuttle-fish', skwid f. 'squid', WJ šākr m.<sup>11</sup> 'edible crab (Cancer pagarus, Lin.)' (vide infra pwēkyou), šervet f.<sup>12</sup> 'shrimp, prawn',

<sup>1</sup> Vide FEW I, BERNIC (Breton) for forms bānak and bāni.

 $^2 < ?$  The *FEW* groups together under a rubric BOB- (onomatopœia) a large number of words containing this sound group; the most common senses of the words deriving from the root are 'pout, grimace' or 'swollen face'. The Jersey sense may be due to a metaphorical comparison with full, pouting lips, or go back to the underlying sense ascribed to the root – 'etwas aufgedunsenes, dickes, geschwollenes ...' (*FEW* I, 419 a).

<sup>3</sup> Literally = 'clasp-knife' (from the shape of the shell-fish); cf. similar metaphors in Engl. *razor-fish*, Fr. *manche de couteau*, and the term more frequently used in the dialect,  $m\tilde{a}so$  (derivative of V. L. \*MANICU). The form *brioche* 'broie' is given by Cotgrave as Norman and appears to be a derivative of Gmc. BREKAN (> Fr. *broyer*), but it is not quite clear how the name of an implement used for breaking or crushing came to designate one used for cutting.

<sup>4</sup> Cf. Coutances, Avranches, Granville *coqueluche* 'mollusc du genre Venus' (ROLLAND, *Faune populaire* III, 220).

<sup>5</sup> < ?

<sup>6</sup> Cf. Middle and Modern Fr. *cornet* 'cuttle-fish', a metaphor from *cornet* 'ink-horn' because of the dark fluid ejected by the cuttle-fish. In the dialect r normally falls when followed by l or n(cf. EJ koyn f. 'horn' < V. L. \*CORNA).

 $^{7}$  < L. AURIS MARIS: final *-r* has normally become silent in singulars, while being retained in plurals, and the singular *ormer* is presumably due to the analogical generalisation of the plural form.

<sup>8</sup> The entrails of the ormer are known variously as *pitõ* m. pl. (R. 2, LR. 1, J. 1, G. 1), *pitouzyer* m. pl. (R. 1), *pitouzyer* m. pl. (0.1), *pitouzõ* m. pl. (C. 1, J. 1), *pitouzõ* m. pl. (R. 2).

<sup>9</sup> Derivative of *pat* f. 'paw', used metaphorically?

<sup>10</sup> Vide N 12.

<sup>11</sup> Francien form found also in Guernsey (chancre s. m. 'crabe').

<sup>12</sup> From Middle French *chevrete*, with transposition of vr > rv,

šęrvę m.<sup>1</sup> collective 'opossum shrimps (Mysis chameleon, Thomp.) and fairy shrimps (Mysis ornata, Thomp.)', vanę (pl. vanyaų) m.<sup>2</sup> 'scallop', EJ vlik f. swąiz<sup>3</sup> 'small inedible winkle-like shellfish', J. 1 vlik šoršyęð<sup>4</sup> 'small inedible winkle-like shellfish', vliko m. 'winkle'.

Belfast.

### N. C. W. Spence.

## Index of dialect terms mentioned

The following alphabetical order has been adopted:  $-a, \tilde{a}, b, \hat{c}, d, e, \tilde{e}, \tilde{e}, f, g, \hat{g}, h, i, k, l, m, n, \tilde{n}$  (and  $\dot{n}$ ),  $o, \tilde{o} \, \ddot{o}, \ddot{o}, p, r$  (and  $\dot{\sigma}$  deriving from intervocalic r), s, š, t, u, ü, w, w, y, z, ž.

afyue 200	vel $d \sim 197$	bā (f. bās) 192, 202
